On 29-12-2018 ,We are (3rd & 4th year) visited Eco park, adyar in Chennai as an industrial visit. We are started from the college at 9.00 am and reached at 11.10 am. It was very interesting to see various type herbal plants, at the same time to learn about environment protection. It is treat for eye for the various plants at the one place .

We can able to gain knowledge about **the environment engineering like environment education, solid waste management, recycle of useless land to beautiful environment ,biodiversity flourishes,etc.,.**And also they explained about the above with the type of plants, opacity and usage of plants (gaya, pinnarisangu, nagamali, avaram, sarakolai, chithiraimoolam, porasu,etc.,) and animals, theirlifestyle (fish ,birds, snakes, mongose, insectetc.,.)

This is nice place well maintained environment.virgin 1000s of herbs ,shrubs,treesare grown together with eco living culture.those with or without country side origin and forest knowledge and who like environmental study have a lot to learn,recal their memories.it is realy very useful for studends tolearn about nature ,forward to next generation.

We enjoyed a lot by visiting this place as an industrial visit.we return 1.00pm to reached college 3.40pm. we thankful to our respectable staffs who are all helped to visit this place.

Thanking you....
