

PLANTATION OF TREES

Global warming which is a big threat to the world/earth, it is the talk of the world today. Regarding this, advices are given from every nook and corner of the world. The Government is also giving a lot of ideas to prevent this, but at the same time, the people think that as an individual they are nothing to do for this. So, as far as possible we are in a position to educate the public regarding this. Another big danger created in this earth is felling of trees. When we are unable to plant a tree, we have no right to fell a tree. Planting trees is one of the measures that will reduce the global warming.

Keeping this in mind, Adhi College of Engineering, Organized a programme of planting trees inside the campus and make the atmosphere green, that means 'Go Green' was conducted on 10-01-2014. Before starting the field work, the students were given awareness regarding this. The faculties of Adhi College gave their valuable ideas.

It was initiated by Dr. A. Devaraju, The Principal, Adhi College of Engineering, and 500 saplings of different kinds were planted. They are watered every day and make the campus green. NSS Team of Adhi College organized the whole programme, and the volunteers of this team had enthusiastically planted the trees and they are still looking after those plants.

NSS Team of Adhi College is planning a green garden project, which will be implemented at this calendar year. They have also planned to extend the rain water harvesting to all the buildings in our college, which will be a big project that will be an example for others.
